

Hydropower Generation Performance in Jhelum River Basin

The Jhelum River Basin is the major part of Chenab River Basin, which is a part of Indus River Basin. The River starts from a mountain spur at Verinag. The riverflows through the Kashmir Valley for a length of 400 km and crosses the Pirpanjal range through a dep gorge. A number of tributaries notable the Lidder, the Sind and the Pohru rivers, which rise in Kashmir join the main river. The river joins the Chenab at Trimmu. The catchment area up to the Indo-Pakistan border is 34,775 sq km.

The project wise generation data of large hydro with installed capacity of the basin in the latest year 2012-13.

SN	Projects	State	Inst Capacity (MW)	Generation (MU)	MU/MW
1	Lower Jhelum	Jammu & Kashmir	105	552	5.26
2	Upper Sindh-II	Jammu & Kashmir	105	309	2.94
3	Uri	Jammu & Kashmir	480	2967	6.18
	Total		690	3828	5.55

- The above graph shows the trend line of power generation of Big Hydropower projects for last 28 years in the basin, the trend-line shows diminishing generation from existing hydro power projects of Jhelum River Basin.
- It shows that the per MW generation in 2012-13 (5.55) has dropped by 8.26% from the highest per MW generation (6.05) achieved in the year 1986-87.
- All generation figures have been taken from official data of Central Electricity Authority (CEA).
